

MOVE

We created our MOVE range with storytelling in mind. MOVE mannequins have movable torsos that pair with different leg positions so you can make each pose your own. The movable quality also means you can redesign your displays as needed with a simple turn of the torso. If you choose to use articulated wooden arms on your MOVE mannequin, there are even more opportunities to alter each pose. There are no limits to your creativity with MOVE – whether covered in fabric or lacquer, legs straight or in motion, with rigid or articulated arms, the possibilities are endless. Pair MOVE male and female poses with MOVE KIDS for an especially eye-catching display.

All wooden arms are processed by hand which can cause deviations in surface or color. MOQs apply.

Seam options

Raised seam

Patchwork seam

Straight seam

U-shape seam

MOVE OPTIONS

Dual fitting

The Dual fitting makes it possible to change between ABS or wooden arms with button fitting and wooden arms with push-and-pull fitting. This fitting is also suitable for mannequins of other ranges.

Arm options

Articulated ABS arms

Wooden arms

Wooden arms with FRP hands

Hook for handbags

Articulated ABS arms

The articulated ABS arms can be used for any adult mannequin or torso. The upper and lower arms are identical for both male and female mannequins, only the hands will be adapted to the particular gender. Behind the shoulder flap there is a bracket with an Allen key. Once the arms have been brought into the desired position, the screws in the joints can be locked with the key, thus fixing the position. Afterwards, the Allen key can be put back behind the flap for storage.
